Summary

Practical problem-solver with 1 year of professional experience at **Cognizant** and a portfolio of end-to-end applications. High-productivity **vibe-coder** leveraging Generative AI to rapidly style responsive UIs and architect backends using the Spring framework. Specialized in **integrating AI capabilities** to solve real-world tasks and deploying live, accessible solutions to the **AWS cloud**.

Skills

Backend & Frameworks: Java, Spring Boot, Spring MVC, Spring Data JPA, REST APIs

Databases & Tools: MySQL, MongoDB, Git, Maven, Kibana, Docker & Kubernetes (Foundational)

Frontend & Others: HTML5, Bootstrap, Tailwind CSS, React, OOP, Agile SDLC

Experience

Programmer Analyst Trainee – Cognizant, Client: Verizon

January 2025 – Present

- Worked within telecom customer-case workflows supporting REST service integrations for operations such as port-in requests and profile updates, helping validate service communication across internal platforms.
- Validated API communication between frontend services and backend customer systems by analyzing request–response flows and service logs during integration testing and troubleshooting using Kibana.
- Designed and developed an internal **Team Productivity Tracker** using **Java, Spring Boot, MongoDB, and Thymeleaf** to replace manual Excel-based reporting used by the team.
- Automated monthly reporting calculations such as story point totals, planned leaves, and working-day summaries using MongoDB aggregation queries.
- Participated in Agile ceremonies including sprint planning, design discussions, and code review sessions.

Projects

Meenakshi-Hostels (Tailwind CSS, Spring Boot, MongoDB, Aws Beanstalk)

[Live Link](#) | [GitHub Link](#)

- **Engineered a centralized administrative platform** to transition a private hostel from paper-based records to a **data-driven ecosystem**, enabling real-time visibility into resident data and fee collections for 300+ users.
- **Optimized database performance** and storage efficiency by integrating **Cloudinary** for media management, ensuring only lightweight image URLs are stored in MongoDB to maintain a **high-performance, scalable backend**.
- Architected a secure, session-managed monolithic backend using a **layered Spring Boot structure** to ensure maintainable business logic and robust **role-based access control** for owners, managers, and residents.

IntelligenceIQ (Spring Boot, Spring AI, Gemini AI)

[Live Link](#) | [GitHub Link](#)

- Built an **AI-driven intelligence layer** to solve onboarding and review bottlenecks by providing a conversational knowledge engine that acts as a **24/7 automated walkthrough assistant** for end-users and developers.
- Integrated a **Generative AI engine** that automates technical knowledge transfer (KT) sessions and architectural code reviews, identifying bad practices and logic errors to **accelerate the overall development lifecycle**.
- Delivered a high-performance terminal UI using **in-memory caching** to achieve **sub-second response times** for complex queries regarding method-level logic, syntax mapping, and system-wide dependency analysis.

Job Tracker (Bootstrap, Spring Boot, MongoDB, Render)

[Live Link](#) | [GitHub Link](#)

- Developed a **full-stack job tracking system** with modules for categorizing applications, storing resume metadata, and managing status updates.
- Added reminder logic for pending applications, triggering follow-up notifications after inactivity periods.
- Optimized storage usage by **85% by storing only resume metadata** instead of full resume files in Database.

Education

Bachelor of Technology in CSE

Koneru Lakshmaiah Education Foundation (KL University), Andhra Pradesh

Graduated: 2025

CGPA: 9.3 / 10

Certifications & Achievements

- **AWS Certified Cloud Practitioner (CLF-C01)**
- **3-Star Java Rating on HackerRank**
